This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The indoor hygrothermal conditions in a surgical suite are experimentally evaluated
- A dynamic thermal model of the surgical suite is developed and calibrated
- The current thermal energy demand of the surgical suite is assessed
- Different ventilation strategies are studied to reduce the suite's energy needs
