This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### ACCEPTED MANUSCRIPT

#### Highlights

- cost-optimal analysis was carried out for a traditional Italian social housing unit;
- cooling requirements were also considered in relation to the climatic context;
- the reference building was investigated in two different climatic zones;
- interventions for optimal solution, n-ZEB target and minimal energy requirements were identified;
- best cost-efficient measures were identified.
