This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The national energy efficiency retrofit scheme in Croatia was analyzed.
- No difference in willingness-to-pay among different income classes was found.
- Final investment cost determines whether the household will invest or not.
- A significant degree of free-riding was found for windows replacement activities.
