This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Heterogeneity of heating energy consumptions is mainly due to installed technology
- The technology-behavior nexus is assessed using an integrated approach
- The origin of energy performance gaps lies in the static calculation of EPRs
- The technology installed imposes certain energy consumption on the occupants
- New build/retrofits need warm-up time to achieve targeted energy consumption goals
