This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Indoor environmental conditions in homes with older people aged 65+ were surveyed.
- Indoor physical parameters, chemical and biological pollutants were examined.
- Older people in urban house experienced a warmer and steadier thermal environment.
- Indoor coal combustion in rural areas can contribute to a high PM_{2.5} and CO level.
- The most frequent fungi was *Cladosporium*, followed by *Penicillium* and *Aspergillus*.
