This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Cooling energy use of office buildings in Hong Kong in the recent and preceding ten years were compared.
- Moderate increase in cooling energy use in recent ten years (2004-2013) was found.
- Design details of sixty-six office developments constructed in recent ten years were examined.
- Moderate increase was attributed to the change in engineering designs.
- Drivers for the change were attributed to government policies.
