

## Accepted Manuscript

Short and Medium-term Forecasting of Cooling and Heating load demand in Building Environment with Data-Mining based Approaches

Tanveer Ahmad , Huanxin Chen

PII: S0378-7788(17)32465-9  
DOI: [10.1016/j.enbuild.2018.01.066](https://doi.org/10.1016/j.enbuild.2018.01.066)  
Reference: ENB 8346

To appear in: *Energy & Buildings*

Received date: 21 July 2017  
Revised date: 12 November 2017  
Accepted date: 27 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## **Highlights**

- The basic objective of this research is to predict the future cooling load demand of WSHP
- Six novel data mining-based models were proposed for forecasting the cooling load
- Six performance indices are used to evaluate the prediction performance of models
- MAPE results for 7-day future load forecasting were 3.544%, 0.405%, 1.703%, 1.928%, 2.592 and 13.053, respectively of six DM models
- Proposed models compared with the existing model BRNN and the MAPE found 2.515% for 7-day
