Title: Thermal uniformity in an open plan room with an active chilled beam system and conventional air distribution systems

Author: Kyu-Nam Rhee Mi-Su Shin Sun-Ho Choi

PII: S0378-7788(15)00095-X
DOI: <http://dx.doi.org/doi:10.1016/j.enbuild.2015.01.068>
Reference: ENB 5674

To appear in: *ENB*

Received date: 19-7-2014
Revised date: 16-1-2015
Accepted date: 31-1-2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHT

- Active chilled beam system was evaluated in terms of thermal uniformity.
- The evaluation was conducted in a full-scale test bed with 100m² floor area.
- Air diffusion performance, draught and thermal stratification were evaluated.
- Active chilled beam system achieved an acceptable comfort with less air flow rate.
