Mesoscale Investigation of Dynamic Fracture in Quartzite and Sandstone and Homogenization to Macroscale

Nathanaël Durr , Martin Sauer , Stefan Hiermaier

PII: S0020-7683(18)30178-1
DOI: [10.1016/j.ijsolstr.2018.04.024](https://doi.org/10.1016/j.ijsolstr.2018.04.024)
Reference: SAS 9980

To appear in: *International Journal of Solids and Structures*

Received date: 28 July 2017
Revised date: 16 February 2018
Accepted date: 27 April 2018

Please cite this article as: Nathanaël Durr , Martin Sauer , Stefan Hiermaier , Mesoscale Investigation of Dynamic Fracture in Quartzite and Sandstone and Homogenization to Macroscale, *International Journal of Solids and Structures* (2018), doi: [10.1016/j.ijsolstr.2018.04.024](https://doi.org/10.1016/j.ijsolstr.2018.04.024)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

MESOSCALE INVESTIGATION OF DYNAMIC FRACTURE IN QUARTZITE AND SANDSTONE AND HOMOGENIZATION TO MACROSCALE

Nathanaël Durr^{1*}, Martin Sauer¹ and Stefan Hiermaier^{1,2}

Nomenclature

C	Longitudinal wave speed
d	Longitudinal distance
E	Young's modulus
G_{exp}^{crit}	Experimental dynamic fracture energy
\bar{G}_{exp}^{crit}	Average of experimental G_{exp}^{crit} values
G_{macro}^{crit}	Macroscopic fracture energy
G_{meso}^{crit}	Mesosopic fracture energy
ΔI	impulse transfer between two fragments
K	Isotropic bulk modulus
ΔL	Distance between the pseudo-RVE and the free end of the specimen
P	Pressure
\bar{P}	Volumetric average of pressure over the RVE
T_{exp}^{crit}	Experimental dynamic tensile strength
\bar{T}_{exp}^{crit}	Average of experimental T_{exp}^{crit} values
T_{macro}^{crit}	Macroscopic tensile strength
T_{meso}	Mesosopic cohesive traction
T_{meso}^{crit}	Mesosopic critical traction
Δt	Time span
t_{pb}	Pull-back time
t_{peak}	Instant of time at which U_{AC} reaches its peak value
U_{AC}	Free-end velocity measured by the accelerometer
$U_{bc}(t)$	Time-dependent velocity boundary condition
ΔU_{pb}	Pull-back velocity
V_{RVE}	Volume RVE
δ_{meso}	Mesosopic separation
δ_{meso}^{crit}	Mesosopic critical traction
δ_{meso}^{max}	Mesosopic maximum separation along the elastic path
δ	Crack opening velocity
$\dot{\epsilon}$	Strain rate
ρ	Density
