Coupled stress and energy criterion for multiple matrix cracking in cross-ply composite laminates

M. Kashtalyan , I.G. García , V. Mantič

PII: S0020-7683(18)30043-X
DOI: [10.1016/j.ijsolstr.2018.01.033](https://doi.org/10.1016/j.ijsolstr.2018.01.033)
Reference: SAS 9882

To appear in: *International Journal of Solids and Structures*

Received date: 4 October 2017
Revised date: 19 December 2017
Accepted date: 25 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new criterion for initiation and development of matrix cracking is proposed
- Two formulations of the criterion – discrete and continuous – are developed
- Relationships between the two formulations are established
- Effects of laminate lay-up and material properties on the failure load are examined
- Comparison against experimental results shows a good agreement
