Improvements in the Measurement of Creep Crack Initiation and Growth Using Potential Drop

K.M. Tarnowski , K.M. Nikbin , D.W. Dean , C.M. Davies

PII: S0020-7683(17)30498-5
DOI: [10.1016/j.ijsolstr.2017.10.037](https://doi.org/10.1016/j.ijsolstr.2017.10.037)
Reference: SAS 9789

To appear in: *International Journal of Solids and Structures*

Received date: 17 February 2017
Revised date: 18 August 2017
Accepted date: 31 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new method of interpreting PD data from creep crack growth testing.
- Experimental and numerical validation is presented.
- Mitigate errors associated with creep strain.
- Facilitates improved residual life predictions of real structures.
