This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- An analytical model characterizing elastic-plastic behavior is proposed for strands and ropes, especially for multi-strands structures.
- The contact status within multilayered strands is carefully studied.
- The different yielding and failure behaviors of wire strands under varying loading conditions are analyzed.
