

## Accepted Manuscript

Risks of Failure of Annealed Glass Panels Subject to Point Contact Actions

Mahil Pathirana , Nelson Lam , Shihara Perera , Lihai Zhang ,  
Dong Ruan , Emad Gad

PII: S0020-7683(17)30406-7  
DOI: [10.1016/j.ijsolstr.2017.09.001](https://doi.org/10.1016/j.ijsolstr.2017.09.001)  
Reference: SAS 9718

To appear in: *International Journal of Solids and Structures*

Received date: 11 April 2017  
Revised date: 31 August 2017  
Accepted date: 3 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Stochastic methodology has been developed for estimating impact damage to a glass panel.
- Flaw size distribution function has been determined.
- Simulation model is capable of predicting the origins of fracture.
- Predicted CPDs of failure load for larger panels have been verified experimentally.
