This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphical Abstract

Bar graph comparison of PICP (%) for different VMD based hybrid techniques with the proposed MFAGO-VMD-MKRR for 10 min, 30 min and 1 hour interval wind speed at 95% confidence level
