Title: On the feature engineering of building energy data mining

Author: Chuan Zhang Liwei Cao Alessandro Romagnoli

PII: S2210-6707(17)31701-8
DOI: <https://doi.org/doi:10.1016/j.scs.2018.02.016>
Reference: SCS 983

To appear in:

Received date: 13-12-2017
Revised date: 12-2-2018
Accepted date: 12-2-2018

Please cite this article as: Chuan Zhang, Liwei Cao, Alessandro Romagnoli, On the feature engineering of building energy data mining, *Sustainable Cities and Society* (2018), <https://doi.org/10.1016/j.scs.2018.02.016>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Different feature engineering approaches are investigated.
- Building physics, weather condition, and occupant behavior parameters are compared.
- Feature importance in different machine learning models are ranked.
- Correlations between features and output in data mining are calculated.
- Proper feature selection methods in data mining are recommend.
