This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

An evaluation of sustainable construction perceptions and practices in Singapore

Belle Chua Lee Yin, Richard Laing*, Marianthi Leon and Leslie Mabon

Postal address: The Scott Sutherland School of Architecture & Built Environment
Robert Gordon University
The Sir Ian Wood Building
Garthdee Road
Aberdeen AB10 7GJ
UK

Highlights

- Whilst certain preconceptions about the realities of sustainable construction might well persist, the enshrining of practical routes to the adoption of sustainable practice within material specification and regulation are likely to have the greatest and most significant effect on sustainable work practices.
- The study results showed a widespread awareness within the industry of the importance of sustainable construction and its impact on the environment.
- The influence of Client awareness and perceived value of sustainable design and practice appeared to still represent a barrier to adoption.
