This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# Approaching Net Zero Energy Housing Through Integrated EV

Elahe Doroudchi<sup>1</sup>, Kari Alanne<sup>2</sup>, Özge Okur<sup>1</sup>, Jorma Kyyrä<sup>1</sup>, Matti Lehtonen<sup>1</sup>

<sup>2</sup> Department of Mechanical Engineering, School of Engineering, Aalto University

## Highlights

- An intelligent energy management system is demonstrated for a single-family house.
- Electric vehicle is considered as an active component of the buildings energy system.
- Energy demand model is proposed to approach the net-zero energy building (NZEB).
- The proposed system is assessed for district heating and ground source heat pump.
- The energy management model results in annual cost savings for the household owner.
