This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Elderly patients with negative life events tended to be depressed than those without such life events.
- Elderly patients with poor self-rated physical health were also more prone to depression.
- CVD impacted associations between psychosocial factors and later-life depression.
