This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Little is known about relationship between identity styles and addiction vulnerability in the university students.
- The addiction vulnerability can be influenced by student's backgrounds such as accommodation and acceptance quota.
- The present study showed that there is positive relationship between diffuse-avoidant style and addiction vulnerability and inverse relationship normative and commitment styles and the studied outcome.
