This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Attitudes towards mentally ill people were assessed in Hungary
- Negative attitudes towards mentally ill people are still highly prevalent
- No significant changes in public attitudes were observed over a 15-year period
- Mentally ill people are one of the most socially rejected groups in Hungary
- Rejection was predicted by gender, education, and familiarity with mental illnesses
