This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This study examines the relationship between temperament and personality and the nomophobic using Questionnaire to Assess Nomophobia (QANP; Rueda et al., 2017) and Temperament and Character Inventory Revised (TCI-R; Cloninger et al., 1993).
- Cooperation is a characteristic that significantly reduces Nomophobic levels.
- Reward Dependence is positively related to Nomophobia.
