This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Falls have significant health consequences and are common in patients with psychiatric disorders.
- The findings of previous studies on the prevalence of falls in Chinese adult and older patients with psychiatric disorders have been inconsistent.
- This meta-analysis found that the prevalence of falls among adult and older psychiatric patients in China was significantly high.
