This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We measured a neural index of elaborative processing during a Cyberball task
- Psychopathic traits were related to greater elaborative processing of ambiguous exclusion
- Psychopathic traits were related to less elaborative processing of social inclusion
- Elaborative processing interacted with psychopathic traits to predict anger and aggression
- Aberrant processing of exclusion may drive aggression in those with psychopathic traits
