This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Multiple cognitive functions were impaired in chronic ketamine users.
- Visual memory, verbal memory and response inhibition were impaired.
- Selective and sustained attention were impaired.
- Impaired selective attention was associated with prolonged ketamine use.
- Impaired sustained attention was associated with prolonged ketamine use.
