This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- We examined behavioral and psychological problems among adolescents in South Korea.
- Multicultural family youths were at risk of substance use, depression and suicide.
- North Korean family youths had a higher risk than other multicultural family youths.
- Educational and preventive interventions are necessary for these high-risk youths.
