This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- ASD families had heavier childcare burden and poorer quality of life than TD families.
- Mothers had heavier childcare burden than fathers both in ASD and TD children.
- Childcare burden mediated the effect of child social impairment of ASD children on maternal quality of life, fathers not.
