This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We examined the independent contribution of emotion dysregulation (ED) dimensions on PD traits
- Emotional nonacceptance was transversally related to various PD traits
- Unique profiles of ED differentiated cluster A, B, and C PD traits
- Impulsivity explained incremental variance in schizotypal, borderline, and antisocial PD traits
- Histrionic, narcissistic, and obsessive-compulsive PD traits were related to lower ED and impulsivity
