This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- IRT identified the amount of information each item adds to the 24-item TSIA
- A 12-item empirically driven model was selected as the best short version
- No items from the Imaginal Processes domain were retained
- The reduced time to administer the instrument potentially provides a practical tool
