This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- PTSD is highly comorbid with other disorders
- Anger explains a significant amount of the variance in PTSD at both the item and factor level
- Anger is a stronger component of PTSD above and beyond the symptom criteria
