This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The study showed that PG-13 is a valid measure of Prolonged Grief Disorder
- A principal component analysis supported a one-factor structure of the PG-13
- The criteria for Prolonged Grief Disorder were met by 16% of bereaved parents
