This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

- Veterans with comorbid PTSD and depression are at significantly higher risk of suicidal ideation
- Psychosocial covariates do not account for the increased risk of suicidal ideation
- Military characteristics do not account for the increased risk of suicidal ideation
- Veterans with PTSD and depression may need more intensive monitoring and treatment
