This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Sound spiritual, religious, or personal belief system positively affects active and adaptive coping skills during remitted phase of schizophrenia.
- Spirituality and religiousness help the individual to cope with illness related stressors.
- Religiousness and spirituality guided interventions might be helpful in illness related stressors.
