This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Perceived lack of control during torture is related to current psychopathology.
- Effects of perceived control during torture on psychopathology were mediated by anger and fear during torture.
- Cognitive and emotional responses to torture may be important to target in treatment interventions.
