This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- a conceptually unexplored behavior where adolescents report deliberately using sex as a means of self-injury was examined
- empirical data on a large non-clinical sample were presented
- adolescents using sex as self-injury were compared to adolescents using direct nonsuicidal self-injury
- there was a distinct association between penetrating sexual abuse, sexual risk-taking behaviors, trauma symptoms of dissociation, posttraumatic stress and sexual concerns and using sex as self-injury
