This is a PDF file of an unedited manuscript that has been accepted for publication. As a service
to our customers we are providing this early version of the manuscript. The manuscript will undergo
copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please
note that during the production process errors may be discovered which could affect the content, and
all legal disclaimers that apply to the journal pertain.

Highlights

- Treatment with cognitive behavioral therapy and antidepressants was associated with improvement in PTSD, depression, quality of life and level of functioning
- Improvement over time was independent of treatment modality.
- Relational conflicts and socioeconomic problems were associated with worse outcome
