This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The research was focused on suicide risk of graduate students.
- There was an interactive effect of depressive symptoms by PTSS on suicide risk.
- The effects of depressive symptoms and post-traumatic stress symptoms on suicide risk were partially mediated by emotional regulatory self-efficacy.
