This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

EIAs from DRG International most accurately measured testosterone

DRG EIAs showed the least biased estimates in higher ranges of testosterone

EIAs overestimated women's testosterone when testosterone was higher

Testosterone EIAs had less linear agreement with LC-MS/MS compared to cortisol EIAs
