This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We sought to replicate improvements in mind-reading after a single dose of oxytocin
- Oxytocin did not alter performance on the Reading the Mind in the Eyes Test
- Item characteristics did not modulate this effect
- Individuals with lower emotional empathy showed larger oxytocin-induced improvement
- Further replication attempts and insights into factors of influence are needed
