This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Knowledge, attitude and epilepsy management skills of trainee teachers are compared pre and post health intervention.
- Baseline knowledge of epilepsy is significantly low.
- Majority have negative attitudes and poor epilepsy management skills pre-intervention.
- Variables significantly improved post health intervention.
- Improvement is sustained overtime.
