This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**HIGHLIGHTS:**

- Epilepsy is frequent in patients with trisomy 18 and 18q- deletion syndrome.
- Over half of the patients develop epilepsy during infancy or early childhood.
- Trisomy 18 is associated more frequent with generalized epilepsies.
- Prognosis is variable and more severe in trisomy 18.
