This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- VPA was the most common AED for the elderly with newly diagnosed epilepsy in Finland
- Reimbursement pattern probably has an impact on the choice of antiepileptic drugs
- Co-morbid conditions are associated with the choice of AEDs for the elderly
