This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

"The causal effect of age at migration on youth educational attainment"

Highlights

- This paper studies the causal effect of the age at migration.
- We apply a sibling fixed effects identification strategy using German data.
- We find significant negative age at migration effects on educational outcomes.
- The critical age of migration is not higher than 6 years, females respond stronger than males.
- Language skills cannot fully explain the causal effect.
