This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- An instrumental variable model is used to examine gene-environment interactions.
- A polygenic score for educational attainment is interacted with veteran status.
- The draft lottery is used as an instrument for Vietnam-era military service.
- The effect of Vietnam-era military service on schooling varies by genetic endowment.
- Veterans with below average polygenic scores completed fewer years of schooling.
