This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Students faced an experimental incentive for meeting an attendance target.
- When it was in place, the incentive increased average attendance.
- After it ended, baseline attenders were unaffected.
- Instead, baseline non-attenders attended less than if they had not been incentivized.
- Their test scores, interest, optimism and confidence were negatively affected.
