This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- CADFES tool is designed for automated classification of focal seizures
- Significant features were selected using neighbourhood component analysis
- Regularization parameter was optimized to ensure less classification loss
- Classification accuracy of 96.1% was attained using support vector machine classifier
- Results were better than existing approaches.
