The Cumulative Capacitated Vehicle Routing Problem: New Formulations and Iterated Greedy algorithms

Samuel Nucamendi-Guillén, Francisco Ángel-Bello, Iris Martínez-Salazar, Alvaro E. Cordero-Franco

PII: S0957-4174(18)30439-1
DOI: [10.1016/j.eswa.2018.07.025](https://doi.org/10.1016/j.eswa.2018.07.025)
Reference: ESWA 12078

To appear in: *Expert Systems With Applications*

Received date: 14 November 2017
Revised date: 9 July 2018
Accepted date: 10 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Two models for the Cumulative Capacitated Vehicle Routing Problem are proposed.
- Two Iterated greedy algorithms are developed.
- The algorithms found new best known results for small instances.
- The algorithms found the best known results for medium size instances in less time.
- The algorithms found competitive results against the literature for large instances.
