Automatic human trajectory destination prediction from video

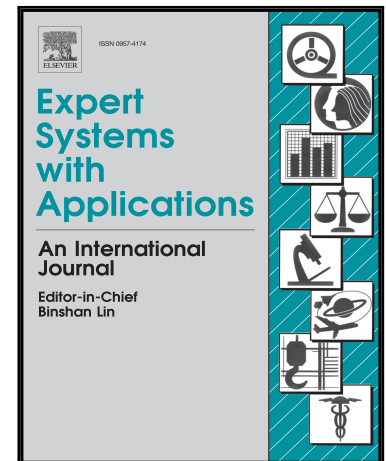

Palwasha Afsar, Paulo Cortez, Henrique Santos

PII: S0957-4174(18)30180-5
DOI: [10.1016/j.eswa.2018.03.035](https://doi.org/10.1016/j.eswa.2018.03.035)
Reference: ESWA 11882

To appear in: *Expert Systems With Applications*

Received date: 23 December 2017
Revised date: 27 February 2018
Accepted date: 20 March 2018

Please cite this article as: Palwasha Afsar, Paulo Cortez, Henrique Santos, Automatic human trajectory destination prediction from video, *Expert Systems With Applications* (2018), doi: [10.1016/j.eswa.2018.03.035](https://doi.org/10.1016/j.eswa.2018.03.035)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

highlights

- An intelligent human trajectory destination detection system is proposed.
- The system assumes pervasive collection of videos.
- The overall system is comprised of three main modules.
- As a case study, it is tested in an exterior university campus environment.
- Results are validated using four classifiers.
