

## Accepted Manuscript

Influence Maximization in Social Networks Based on TOPSIS

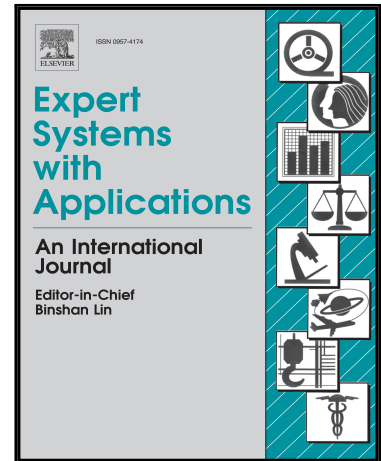

Ahmad Zareie , Amir Sheikahmadi , Keyhan Khamforoosh

PII: S0957-4174(18)30278-1  
DOI: [10.1016/j.eswa.2018.05.001](https://doi.org/10.1016/j.eswa.2018.05.001)  
Reference: ESWA 11953

To appear in: *Expert Systems With Applications*

Received date: 11 November 2017  
Revised date: 5 April 2018  
Accepted date: 1 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlight**

- Influence maximization in complex networks is a significant problem.
- Seeds Distance is an effective parameter on the success of the spreading process.
- Nodes influence and nodes overlap are both taken into account to select seeds.
- TOPSIS method is applied to specify ideal nodes.
- Experiments show better results as compared to the state-of-the-art methods.
