This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A domain transferable, Twitter specific lexicon for sentiment analysis is proposed
- The approach produces more accurate results than competing lexicons
- Five datasets are used to show domain transferability with excellent results

Twitter Sentiment Analysis (TSA)
Twitter Generic Feature Set (TGFS)
Twitter Domain Specific Features (TDSF)
Twitter Specific Lexicon Set (TSLS)
