

## Accepted Manuscript

A radiosity-based method to avoid calibration for Indoor Positioning Systems

Óscar Belmonte-Fernández, Raúl Montoliu,  
Joaquín Torres-Sospedra, Emilio Sansano-Sansano,  
Daniel Chia-Aguilar

PII: S0957-4174(18)30211-2  
DOI: [10.1016/j.eswa.2018.03.054](https://doi.org/10.1016/j.eswa.2018.03.054)  
Reference: ESWA 11901

To appear in: *Expert Systems With Applications*

Received date: 28 July 2017  
Revised date: 5 March 2018  
Accepted date: 26 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A WiFi signal propagation model based on the radiosity technique is proposed.
- The model is used to generate a WiFi map for indoor location purposes.
- The performance of the proposal is assessed by means of Machine Learning algorithms.
- Time series for RSSI should be carefully simulated to mimic real behaviour.
